

UPGRADE YOUR TRUCKCAM SYSTEM AT VOLVO

STEP 1

Software upgrade to JOSAM cam-aligner

As a user of the TruckCam All-In-One or Silver Line system, you now have the opportunity to upgrade to the JOSAM cam-aligner software.

With the JOSAM cam-aligner software, you get an easy-to-use software with a modern interface, intuitive animations and guided user instructions.

The software is fully compatible with your current equipment* and can also be used for FLS/LPOS calibration (see step 2).

** Camera sensors TC-256 or TC-268 are required*

STEP 2

Kit for FLS and LPOS calibration

The FLS/LPOS calibration kit comprises a calibration stand and an additional plugin licence for the JOSAM cam-aligner software, with which Volvo Group FLS and LPOS sensors can be calibrated.

Multi-bracket adapters are available for a variety of Volvo Group brands and models.

Calibration is performed using the calibration stand and multi-bracket adapters together with your existing cameras*, frame gauges and reflective targets.

** Camera sensors TC-256 or TC-268 are required*

STEP 3

Choose FLS/LPOS multi-bracket adapters

SEE KITS & ORDER FORM ON NEXT PAGE
